

OPENSPIRIT

Infinite Integration

Seamless Data Transfer Using OpenSpirit CopySync

If you have spent any time at all managing data from multiple data stores and projects, then you have already experienced a few of the fundamental integration challenges that exist in today's multi-vendor environments.

Oil companies are using OpenSpirit to replace error-prone processes that involve numerous people, multiple steps and days or weeks of time and effort; streamlining them into automated tasks that take only seconds or minutes.

Take Control of your Data

Data transfer processes should be effortless, but depending on the complexity of your environment, things might be easier said than done. Do you:

- Operate in a multi-vendor, multi-version data store environment?
- Use manual ASCII import/export or other custom scripts to move well, seismic and interpretation data between multiple projects and data stores?
- Worry about the quality of your data as it moves across the infrastructure?

Manage these Challenges in your Environment Today

The OpenSpirit CopySync utility will help you improve efficiency and automate workflows with one-step data transfer among OpenSpirit-enabled data stores. Any selected data can be copied from the source project(s) to a chosen destination project in a single step without any intermediate files. Data may be selected by examining attributes or by spatial query given a GIS selection in ArcGIS.

Not only will you make ASCII procedures a thing of the past, but you can be assured that the OpenSpirit units and coordinates transformation capabilities will preserve the quality of your data regardless of its source or destination.

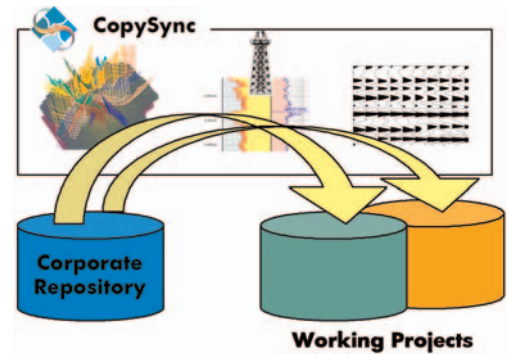

CopySync Makes it Easy

With a host of flexible query builders and data selection options, you can select data from any OpenSpirit-enabled data store in your network, allowing you to mesh projects from disparate data sources and versions.

- Count on seamless, one-step, transfer of well, seismic and interpretation data between project data stores
- Streamline process of initial project loading and improve data-transfer efficiency
- Automate workflows to ensure that relevant data is available in working projects at the right time
- Save time and reduce risk by eliminating processes that require time-consuming and error-prone intermediate file formats
- Convert unit, coordinate, and attribute values on the fly based on the requirements of target project
- Access more than a dozen OpenSpirit-enabled data stores, including OpenWorks®, GeoFrame®, Finder® and KINGDOM

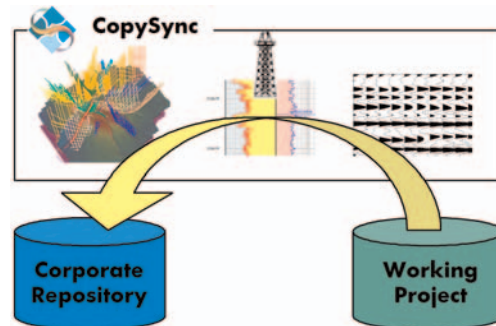

Refresh Working Projects

- Define selection criteria and run copy jobs on scheduled basis
- Keep working projects up-to-date with current data

Data transfer is fully digital in one step. The idea that you can remove the human error out of the process is worth a lot.” – Independent Consultant

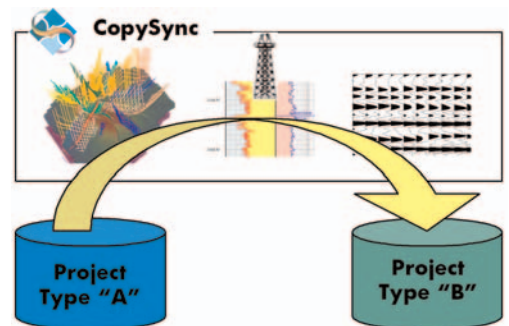

Capture Working Project Data

- Define selection criteria and run copy jobs on scheduled basis
- Capture new processed and interpretive data

Project Conversion

- Easily reformat entire projects or selected subsets between disparate vendor formats

Make the move to seamless data transfer using CopySync!
