

Infinite Integration

Enabling a World of Data

Schlumberger Information Solutions and OpenSpirit®: Enabling Multidiscipline Collaboration in the Digital Oil Field

System administrators, data managers, and geoscientists are eager to realize the benefits of the latest geotechnical applications and integrated workflows. SIS and OpenSpirit share a vision to provide open, multidiscipline interoperability solutions to the upstream E&P industry.

OpenSpirit is your answer to multivendor application and data interoperability. Together, SIS and OpenSpirit are working to provide oil companies access to the right data at the right time, enabling key workflows that help E&P project teams speed their way to first oil and back.

Enabling Multidiscipline Collaboration

Interoperability among geotechnical datastores and application environments drives success in the oil field. SIS and OpenSpirit give project teams access to what they need to make this a reality:

- through the Petrel* OpenSpirit Plug-in, readily share data and application interaction events with a diverse set of OpenSpirit-enabled datastores and applications
- expand data and application-sharing workflows with the next-generation Ocean*-Petrel Application Adapter from OpenSpirit
- give clients expanded user-defined workflow possibilities—using OpenSpirit, SIS reaches out to other industry framework environments, including DecisionSpace® and EPOS™
- make the most of ProSource* and DecisionPoint* workflows with data discovery across the enterprise
- access decision-critical data through live connectivity to distributed project and corporate datastores, including GeoFrame*, Finder*, OpenWorks, R5000, KINGDOM, and future Seabed* environments
- move and transfer data among best-of-breed applications and datastores that comprise multivendor environments.

About Schlumberger Information Solutions

SIS offers a full range of information management and infrastructure solutions for the E&P domain.

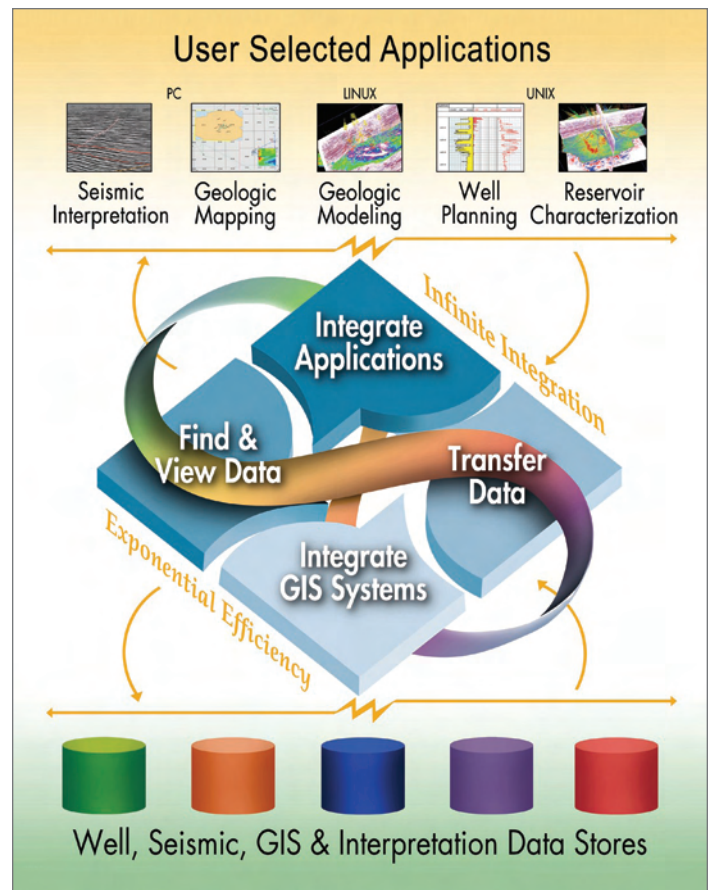

SIS and OpenSpirit are working together to provide open, multidiscipline workflow solutions to the upstream E&P community. Integration via OpenSpirit offers users access to a world of data and industry-leading applications and environments.

Schlumberger Information Solutions (SIS) is an operating unit of Schlumberger that provides software, information management, IT infrastructure, and consulting services. SIS enables oil and gas companies to achieve breakthrough team performance, unlocking the potential of E&P teams to step-change their effectiveness and productivity. Through our technologies and services, oil and gas companies can drive business performance and realize the potential of the digital oil field.

About OpenSpirit

Increasing reservoir complexity demands comprehensive analysis coupled with excellence in science. Multivendor environments allow you to bring together the best tools to define the subsurface, making collaborative workflows and multidiscipline decisions a business imperative.

However, fundamental integration challenges still exist in our industry. Data locked away in diverse datastores, multiple legacy projects, and inherited IT environments are barriers to realization of this digital oilfield vision.

At OpenSpirit, our sole focus is integration:

- SOA
- standards based
- platform independent
- vendor neutral
- event driven.

As the industry's undisputed open-integration standard, OpenSpirit is the key to achieving true workflow transparency.

For more information, go to www.openspirit.com or e-mail your local OpenSpirit representative at sales@openspirit.com.
